KEEPING SIGHT OF WHAT'S IMPORTANT

MANAGEMENT INFORMATION DASHBOARD

Meaningful and immediately useable information instead of a flood of data: that's what the MID (Management Information Dashboard) is all about. This software tool, which has been exclusively developed by DESIGNA, uses the outstanding networking technology and open interface concept of the PM ABACUS to optimal effect. It is simple to operate and highly efficient.

MID evaluates the countless data sets that are continuously generated by the on-site terminals and from this determines what the most important indices are. It presents them in graphic form in real time – in the form of a snapshot of current values, as well as showing trends over a defined period of time. Over and above this, MID also monitors selected parameters automatically, and continually compares them with specified threshold values that are automatically set for every system. The respective status is highlighted in colour and displayed so that it can be quickly understood.

The analysed data can originate from the operational side of the business, the commercial area and from the cost accounting level – ranging from the condition of the equipment and the number of different registered activities right up to the occupancy and turnover of the individual car parks.

Critical values or developments can thus be quickly recognised enabling you to respond immediately and thoroughly – without first having to analyse the information yourself. The result: the control of your car parks will become manifestly more efficient and the operation of your parking spaces even more profitable.

THIS IS HOW EASY PARKING MANAGEMENT CAN BE – MID GENERATES VALUABLE INFORMATION FROM SYSTEM DATA
